

B2B SaaS Healthcare

# Simplify CIAM in Complex Healthcare Environments

Providing customer identity (CIAM) for healthcare enterprises involves handling user access across many departments, subsidiaries, and stakeholders – all while meeting strict regulations like HIPAA. This complexity can slow you down and create headaches around security and compliance.

Frontegg takes that burden off your plate. Our CIAM platform helps you securely manage users and permissions at scale, so your enterprise customers get the control they need without extra hassle for your team.

## Key features

### Multi-tenant by design

Keep each enterprise customer's data separate and customizable to their unique setup.

### Self-service FGA

Let your customers independently manage who has access to what, across teams and departments. Think RBAC, ReBAC, and ABAC.

### Account hierarchies

Easily model complex org structures – subsidiaries, regions, or business units – to match your customers' unique needs.

### Built-in compliance

Stay in compliance with HIPAA and other healthcare regulations without slowing development.

Who's it for?

## Healthcare SaaS companies who are serving enterprise providers, insurers, and employers.

## Benefits

### Meet compliance requirements

Keep patient data safe and satisfy regulatory demands.

### Reduce developer workload

Avoid building and maintaining complicated identity features from scratch.

### Support enterprise scale

Manage thousands of users across complex organizations with confidence and clarity.

“Frontegg’s multi-tenant capabilities and self-service features were a huge deal for us. We didn’t want to build everything ourselves. And now, we don’t have to.”

Saru Seshadri
